

Tomas Bascal

Neuquén, Argentina | Cel: +54 299 673 8145 | tom.bascal@gmail.com | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Full Stack Developer with 5+ years of experience building scalable end-to-end applications: from user interfaces with React and Angular to backend architectures on AWS (EC2, S3, Lambda, API Gateway, RDS, IAM). Specialized in generative AI integrations (OpenAI API, LangChain, RAG) and technical leadership of agile teams. Passionate about connecting robust cloud infrastructure with intelligent solutions that drive measurable business impact.

WORK EXPERIENCE

TECFIELD SRL | OPS SRL (Oilfield Products Service)

12/2024 – Present

Project Lead (DevOps) – Full Stack Developer

Neuquén, Argentina

- Led the design and implementation of a multi-module web platform for HSE sectors (Health, Safety, Road Safety), reducing report generation time by ~60% through automation with Node.js and AWS Lambda.
- Architected serverless infrastructure on AWS: Lambda + API Gateway for high-traffic endpoints, S3 for document and image storage, and RDS (PostgreSQL) as the primary database with automated backups via IAM Roles.
- Implemented CI/CD pipeline with GitHub Actions, reducing deployment time from 2 hours to 15 minutes, integrating automated tests and security validations.
- Managed analysis of large volumes of business statistical data, building dashboards with React + Recharts consuming REST APIs deployed on AWS EC2 with Nginx as reverse proxy.
- Led a team of 4 developers: sprint planning, code reviews, delivery management, and direct communication with end clients.
- Designed relational and non-relational database architecture (PostgreSQL + MongoDB) with normalized schemas optimized for high-concurrency queries.

TECFIELD SRL

03/2024 – 12/2024

Full Stack Developer

Neuquén, Argentina

- Developed and migrated complex dynamic forms from a legacy system to a modern React + Node.js platform, reducing data entry errors and driving a full product renewal.
- Integrated JWT authentication and role-based access control (RBAC) leveraging AWS IAM for permission management across cloud services.
- Historical data migration to new architecture: designed ETL scripts in Node.js to process over 50,000 records without data integrity loss.
- Direct collaboration with the client and operations team for requirements gathering, support, and continuous improvement of the core system.

Blister SRL

07/2021 – 03/2024

Project Lead & Lead Developer

Neuquén, Argentina

- Designed and developed a full management system (internal ERP) with Angular, Node.js and MongoDB, covering inventory, fleet, and HR modules for a company with 6,000+ active users.
- Implemented architectures with Laravel and MySQL with a strong focus on security and data processing speed.
- Deployed applications on hosted servers with CPanel and Nginx, SSL/TLS configuration and manual scaling, achieving high uptime over 2+ years of operation.
- Led full project lifecycles: creation, planning, estimation, sprint management and delivery KPI tracking. On-time delivery across all established project deadlines.
- Organized DevOps workflow: versioning with Git/GitHub, staging and production environments in Docker, ticket management and N1/N2/N3 support.

- Reduced incident resolution time by implementing an internal ticketing system with automated email and Jira alerts.

PROJECTS & AI INTEGRATION

Chatbot for Expense & Income Management

2026 – Personal Project

Stack: [Node.js](#) · [OpenAI API](#) · [Google Vision API](#) · [Oracle Cloud VM](#) · [Anthropic API \(Claude\)](#) · [Telegram Bot API](#) · [MongoDB Atlas](#)

- Deployed the API on a VM with an elastic IP on Oracle Cloud Infrastructure, using Docker Compose for a scalable setup from a Git repository in a single command.
- Implemented a receipt processing pipeline using Google Vision API (OCR) for automatic extraction of amounts and categories, storing structured data in MongoDB Atlas.
- Developed a Telegram chatbot with access control and security parameters configured, serving as the single entry point for receipt uploads and queries.
- Integrated Claude Sonnet (Anthropic API) for automatic statistical analysis generation, delivering monthly and annual reports with insights on spending and income patterns.

Automated Reporting with Generative AI

2025 – Professional Project

Stack: [Node.js](#) · [Anthropic API \(Claude\)](#) · [AWS Bedrock](#) · [React](#) · [PostgreSQL](#) · [GitHub Actions](#)

- Developed a microservice that analyzes workplace safety data and automatically generates executive reports using the Anthropic Claude API (claude-sonnet-4), eliminating 8 hours of manual work per week.
- Integrated AWS Bedrock as an alternative inference layer for Titan models, ensuring availability and reducing API costs during load peaks.
- Full CI/CD pipeline with GitHub Actions: linting, unit tests (Jest), Docker image build and automated deployment to AWS ECS Fargate.

TECHNICAL SKILLS

Cloud / DevOps | AWS EC2, S3, Lambda, API Gateway, RDS, IAM, Bedrock, ECS Fargate · Docker · Nginx · GitHub Actions (CI/CD) · Linux

AI & LLMs | LangChain · OpenAI API (GPT-4, Embeddings) · Anthropic API (Claude) · AWS Bedrock · RAG · pgvector

Backend | Node.js · Express.js · REST APIs · JWT / OAuth2 · Microservices

Frontend | React · Angular · JavaScript (ES6+) · PHP · EJS · HTML5/CSS3

Databases | PostgreSQL · MongoDB · MySQL · SQL & NoSQL

Developer Tools | Git · GitHub · Visual Studio Code · JIRA · Figma · Postman · Jest

EDUCATION

Bachelor's in Computer Science

Universidad Nacional del Comahue

Completed 3 years

Neuquén

Systems Analyst Technician

IFES Neuquén

2nd year (in progress)

Neuquén
